

IOSAT™

Potassium Iodide Tablets

When nuclear emergencies strike, use the FDA approved Iosat™ tablets to help protect your family. The FDA approved Iosat™ Potassium Iodide tablet works as a radiation blocking agent that will help protect your family during a nuclear emergency. Iosat™ saturate the thyroid with stable iodine, blocking the thyroid's absorption of cancer-causing iodine released from a nuclear reactor or nuclear bomb. Each package provides a two week recommended dose for one adult. Children can also take Iosat™ tablets at a lower dosage (click the Additional Info tab below to learn more). Each tablet is individually foil-sealed for dosage and there are 14 tablets per package.
